

Homicide Cleanup Service

According to the F.B.I., there were 16,204 homicides in 2009 in the United States* and according to the Los Angeles County Sheriff's department 2009 census, there were 314 in Los Angeles County, the lowest in 50 years. Caldecon crime and trauma scene cleaning has cleaned a number of high profile murder scenes in the Southern California area and is experienced with dealing with law enforcement agencies such as the Los Angeles Police Department, the Los Angeles Sheriff's Department, the United States Army and private government security contractors. A usual crime scene is processed by the homicide department, detectives, forensic units and other law enforcement related professionals. At all these scenes, there are other chemicals/solvents such as fingerprint dust, chalk and marker prints, stickers, needles, bloody gauze/medical supplies and candle wax that need to be removed from the scene besides dried blood and body fluids. In almost all cases, homeowners or business insurance coverage is used. Most importantly we find that the business owner needs the scene cleaned up quickly and discretely so that business can resume. If your business or home has been affected by a violent event, it will most likely take a few days to a few weeks before you will be able to access the area. Call us today, we know what to expect and can help you restore your home or business quickly, safely and professionally. (818) 442-0055 or (866) 442-0088

Most people don't realize that law enforcement agencies and emergency responders (ambulance, firefighter and EMT's) do not clean up the blood and tissue that is left at the crime scene. Homeowners and victims are left with these disasterous scenes which can be full of bloodborne and airborne pathogens. Often times we see bandages, blood, needles and tissue splatter that needs to be removed and disinfected. Blood is not easy to clean and is also not safe to clean by someone who is not experienced or informed of bloodborne / airborne pathogens. (Bloodborne pathogens are viruses or bacteria that are carried in blood or air such as HIV, HBV (hepatitis B), HCV (hepatitis C), Herpes, E.coli and hantavirus.

Call Caldecon today at (818) 442-0055 or toll free (866) 442-0088. We are in the Los Angeles area and can provide you with a rapid response to your cleaning needs.
