

Suicide Cleanup Service

Suicide Cleanup Service in Southern California There are few things more devastating to a family and a community than a suicide. Unfortunately, suicides do happen. Caldecon provides complete disinfection of these scenes, including the removal of all blood, stains, body fluids, mattresses and any furniture. (At the client's request) Our cleanup team is always discreet and our trucks are not labeled with our services for your privacy concerns. Caldecon will arrive in a discreet non-labeled vehicle and it is our policy to never speak to the media, neighbors or any outside agency. Suicide scenes range from complete multi-room devastation to contamination in a very small area. We are equipped and will remove any affected furniture, mattresses, carpeting and items upon the client's request, at the time of our cleanup. We will not leave you with more people to call for mattress or other furniture removal. Basically, it is our job to remove and restore your area to livable conditions. We do not want you to experience or see any history of a tragedy. Our suicide cleanup service is likely to be covered by the homeowner's insurance policy. It's not something anyone regularly thinks about but in most cases, the cost of the cleanup would be covered. Remember to use a state licensed biohazardous waste cleanup company. Caldecon holds TSW #243. We also use industrial ozone generators for odor abatement problems. Our odor abatement enzymes and generators are truly the most professional and effective tools in the business today. We do not run around with little ambient hotel ozone generators and tell you the odor will go away with time like other companies may say. We know from experience that odors can be completely destroyed. By law, all biohazardous waste must be disposed of at a special biohazardous waste facility. We are legally contracted with a major biohazardous waste sanitation facility located in Sun Valley, California. We at Caldecon can provide rapid response to your company or home clean-up needs and we ensure that your biohazardous waste is removed and transported to the proper waste facility. We are a crime scene cleaning company servicing the Los Angeles metro area and beyond. Call us at (818)442-0055.

Before Cleanup After Cleanup

These pictures represent only one quarter of this trauma scene but this demonstrates how severe a site can be and the difficulty of giving an estimate over the phone. This site took three technicians over 3.5 hours to disinfect and generated approximately 80 pounds of waste, 30 lbs. of which was contaminated stick on cloth tile, not shown, and outside of the bathroom. Most of the time, there is personal property that is so contaminated that it needs to be disposed of such as clothing and bathroom toiletries. We do decontaminate personal effects such as wallets, cell phones, jewelry and items of value but most other items are disposed of in biohazardous waste bins. What you do not see here is the blood that was in the drawers, cabinets, behind chairs, on walls, doors, ceilings, inside light switch plates and in concrete seams and cracks. We employ special equipment and solutions to detect body fluids not visible to the naked eye and use virucidal EPA approved disinfecting agents and enzymes to sanitize trauma scenes.
